

SOVEREIGNTY AND PRIVACY POLICY e-META LABS SASU

1. Identity and Operations e-META LABS SASU operates as an international strategic intelligence unit from its various hubs (Dakar, Paris, Dubai, etc.). The data collected via our B2B platform is strictly limited to the scope of conducting AI-assisted strategic diagnostics.

2. Data Collection and Processing We only collect information necessary for the analysis (entity name, contact info, contextual data, and voluntarily provided strategic documents). The delivery of the final analysis can be done via end-to-end encrypted WhatsApp Business API, subject to the client's explicit consent (Opt-in).

3. Sovereignty and Artificial Intelligence The confidentiality of your strategies is our absolute priority. Information submitted to our AI engine (Google Gemini Pro/Flash) is processed ephemerally. No public or private machine learning models are trained using your operational data.

4. Blockchain Anchoring and Intellectual Property To ensure the absolute protection of your ideas, any document uploaded to our platform is instantly cryptographically hashed (SHA-256 algorithm). This unique digital fingerprint is anchored on the public blockchain via Woleet technology. This grants you irrefutable digital proof of existence without us needing to store the original file long-term.

5. Non-Substitution Clause The reports and matrices generated by the e-META LABS AI engine constitute high-level strategic decision-support tools. Under no circumstances do they replace certified legal, tax, or financial consultations by licensed professionals.

6. Contact and Rights For any requests regarding your data (access, deletion, portability), please contact our compliance team at: contact@e-metalabs.com / support@e-metalabs.com.
